

# Hot-Shot®

Thaws Frozen Pipes Quickly

Scan to see webpage

No more tearing up floors, breaking through walls, or digging up pipes in frozen ground. Eliminate hazardous blow torches. With the safe Hot-Shot® pipe thawer, you can accomplish the job faster and easier – and save time and money.

## Easy to Operate

Just carry the Hot-Shot to the job, attach the clamps to the frozen pipe and plug it into a 115 volt receptacle. In minutes, the frozen pipe will be flowing again. The Hot-Shot 320, weighing in at just 30 lbs., generates 320 amps of thawing power, yet draws just 14 amps. This little unit can quickly thaw 1-1/2" diameter lines up to 100 ft. long.

## Hit 'em High; Hit 'em Low

The Hot-Shot 400 clears longer and larger lines with 400 amps of power. It's powerful enough to clear 1-1/2" diameter lines up to 175 ft. long, yet weighs just 31 lbs.

Stuck on a job with only 15 amp breakers? Just flip the switch on the Hot-Shot 400 and the amp draw drops below 14 amps while the unit still delivers 320 amps of thawing power. Safety features like thermal overload protection and circuit breakers are standard equipment.

## Key Features (Hot-Shot® 320)

- 320 Amps of thawing power
- Housed in heavy-duty steel boxes
- Thaws 1/2" to 1-1/2" diameter pipes up to 100 feet long
- Draws ONLY 14 Amps
- Thermal overload protection
- Circuit protectors

## Key Features (Hot-Shot® 400)

- 400 Amps of thawing power
- Housed in heavy-duty steel boxes
- Thaws 1/2" to 1-1/2" diameter pipes up to 175 feet long
- Draws ONLY 20 Amps
- Thermal overload protection
- Circuit protectors
