

Model 88™

You walk while it works

“ Companies like ours want a machine that’s going to tackle tough jobs – like roots. The Model 88 is reliable, has plenty of torque, and is very rugged. ”

Michael Williams, Just Drains, LLC,
Philadelphia, PA

The Model 88™ sectional drain cleaning machine is almost as easy to run as a lawnmower. Attach the eight- or ten-foot cable sections to the machine, stand behind it, and turn it on. The cable spins itself into the drain line. When a section has run into the drain, attach another one and keep going. Cable sections snap together in a second and are taken apart quickly with a spanner wrench or screwdriver.

The Model 88 handles tough jobs up to 200 ft. long in lines from 3" to 10" diameter. A standard 3/4 hp capacitor motor supplies plenty of power, and an adjustable safety clutch protects cables and operator.

No Wrench Coupler

G-CDC Cable Drive Coupler allows coupling and uncoupling of cable from machine without a wrench. It's included with units shipped with "G" cables.

Rodrunner®

Versatile Sectional Machine

Scan to see webpage

The versatile Rodrunner® offers all the benefits of a sectional drain cleaning machine – light weight, high speed cable rotation, and short, quick coupling cables – plus it can be operated in open spaces or in close quarters.

No Wrench Coupler

The Rodrunner can be operated like the Model 88 in “lawn-mover” fashion, standing behind the machine when space permits. Or, when the clogged drain is in a tight basement, the Rodrunner can easily be used in close quarters as well.

The Rodrunner can handle the toughest stoppages in 3" - 10" lines, as far as 200 feet away. A heavy duty 3/4 hp motor spins the cable at 700 rpm. And the adjustable slip clutch helps protect the cables against sudden torque build ups.

“ It gives fierce boring power and works sludge really well in long lines. ”
